

HOSPITALITY MANAGER

The Hospitality Manager module provides a complete administration system for those managing multiple deliveries of food and beverages.

Clients using this module will typically manage a serviced office, a conference centre, an outside catering company, or work within a facility that has significant meeting and conference room space. The module provides an online platform for customers to place an order, and includes all of the online processes for a hospitality team to manage that order. This is a secure/password protected system, offering added peace of mind.

Key module features include:

- Pre set delivery times
- Multiple customer authorisation levels
- Approve or reject orders with optional reasons
- Kitchen production reports and delivery notes
- Automatic electronic invoicing
- Charge to cost centres and/or pay by credit card

The Hospitality Manager module protects the bottom line. It ensures everything ordered is invoiced, that customers can trade up when made aware of special promotions, and that menus and tariffs are changed in line with prices and seasonality.

The module is licensed on a monthly basis and can be linked to other IndiCater modules and applications at any time.
